COMMERCIAL QUARTZ HEATING SYSTEMS

GO GREEN WITH SOLAIRA HEATERS

Solaira Infrared heating technology allows you to perfectly warm your patio or terrace without raising the temperature of our planet.

With smoking bans being implemented in jurisdictions across North America, patio heaters are becoming increasingly popular. Natural gas and propane burning heaters can, however, raise serious concerns about the environment. With direct Co² and No^x emission, they can have a negative impact on the planet.

Solaira patio and terrace heaters offer the perfect solution. This extremely efficient heating method produces no direct Co² or No^x emission and only warms up people, not the air. Dimmable heat levels allow you to adjust the heater perfectly to all weather circumstances. As a result, you can have a warm and inviting terrace, without adverse environmental effects.

SAVE MONEY AS WELL !

Solaira patio and terrace heaters are up to 50% more energy efficient compared to other technologies! In fact, 85 to 90% of the electricity used is converted into heat! Occupancy sensors ensure the heaters only work when they have to, reducing energy consumption even further. In other words, Solaira Patio and Terrace Heaters not only contribute to a better environment; they can reduce your energy costs considerably as well. Want to save the planet and money while you offer your guests the most comfortable terrace? Start using Solaira patio and terrace heaters today!
